

Timer triggers 3 ADCS for simultaneous sampling

Purpose of sample code

This code is used to control three ADCs to conduct N samplings based on equal time intervals.

Note: This sample code is written based on Artery's V2.x.x BSP. For other versions of BSP, users should pay attention to the differences in use.

Applicable products:

Product series	AT32F403
	AT32F403A
	AT32F407

List of major peripherals used in this code:

Peripherals	TIMER
	ADC

1 Quick start

1.1 Hardware resources

- 1) AT-START-F403A V1.x evaluation board
- 2) Serial output PA9 (via AT-Link-EZ)

Figure 1. AT-START-F403A V1.0 evaluation board

1.2 Software resources

- 1) AT32F403A MCU, and AT32F403A_407_Firmware_Library_V2.0.6 (BSP version)
- 2) TMR1_CH1 low level triggers TMR2_CH2 and TMR2_CH3 to output 20 pulses (“#define pluse_cnt 20” value can be changed in the at32f403a_407_board.h);
TMR2_CH2 rising edge triggers ADC1/ADC2 sampling;
TMR2_CH3 rising edge triggers ADC3 sampling
- 3) DMA1 is responsible for transporting 20 ADC1/ADC2 sampling values;
DMA2 is responsible for transporting 20 ADC3 sampling values
- 4) Sampling results are output to PC via PA9 (USART1_TX), and LED2/3/4 toggle

Note: All of projects are built based on Keil 5. For the need to run in other compiling environments, user can make simple adjustments according to AT32xxx_Firmware_Library_V2.x.x\projectat_start_xxx\templates.

1.3 Example case

- 1) Open `\\SourceCode\lat32f403a_tmr1_tmr2_3adcs_V2.0.0\utilities\mdk_v\3adcs.uvprojx` (source code), compile and download it to the evaluation board
- 2) Apply different voltages to PC2/PC3/PC4
- 3) View print information through a serial interface. ADC1 and ADC2 are stored in the same 32-bit register, in which, the high 16 bits represent ADC2 sampling results, and the low 16 bits ADC1 sampling results.

Figure 2. Running information print

```
triple_adc_synchro_trigger
adc1_ordinary_valuetab[0] = 0xffe
adc2_ordinary_valuetab[0] = 0xffe
adc3_ordinary_valuetab[0] = 0x000

adc1_ordinary_valuetab[1] = 0xfff
adc2_ordinary_valuetab[1] = 0xffd
adc3_ordinary_valuetab[1] = 0x000

adc1_ordinary_valuetab[2] = 0xffe
adc2_ordinary_valuetab[2] = 0xffe
adc3_ordinary_valuetab[2] = 0x000

adc1_ordinary_valuetab[3] = 0xffe
adc2_ordinary_valuetab[3] = 0xffe
adc3_ordinary_valuetab[3] = 0x000

adc1_ordinary_valuetab[4] = 0xfff
```
