

Toggling RXDTS in code causes USB bus error

Questions:

If the RXDTS bit is toggled during code execution, this behavior would cause DATA PID mismatching issue between the host and USB device. For instance, the host sends DATA1, but the USB device remains in RXDTS=0 status (indicating that it expects to receive DATA0). In this case, USB bus error may occur, and the BE flag is set.

Answer:

Clear BE flag immediately in code.

```
/* clear suspend flag */  
usb_flag_clear(usbx, USB_BE_FLAG);
```

Type: MCU application

Applicable products: AT32 series with USB

Main function: USB

Minor function: None
